

Commit to 100% Renewable Electricity!

Health Care Without Harm is calling on hospitals, health centers and health systems all around the world to commit to 100% renewable electricity in the lead up to the Global Climate Action Summit, which will take place in San Francisco, California on September 12-14, 2018.

At the Summit cities, states and provinces, private companies, and civil society organizations will announce a set of commitments for climate action. One of these commitment areas will be for 100% renewable electricity.

Health Care Without Harm is bringing together health care institutions from around the world to join this multi-sectoral commitment to transition to 100% renewable electricity in the coming years.

With hospitals, health centers and health systems around the world increasingly deploying solar, wind and other sources of clean, renewable energy, the Summit represents a moment for health care to join other sectors of society to announce its ambition to protect public and planetary health from climate change.

Health care institutions large and small on every continent are already using 100% renewable electricity. Others plan to do so in the coming years or even decades.

The Summit represents an opportunity for everyone committed to 100% renewable electricity to stand up and be recognized as global leaders. And it represents an opportunity for those who have not made the commitment to do so.

Health Care Without Harm will announce all health care institutions committing to 100% renewable electricity on stage as part of the official proceedings of the Global Climate Action Summit.

Following the Summit, we will continue to build the 100% renewable electricity as a leadership body within the Health Care Climate Challenge.
